PROFESSIONAL SUMMARY

Full Stack Developer with 1+ years of experience building scalable and high-performing web applications using the MERN Stack and Microservices Architecture. Skilled in designing RESTful APIs, implementing JWT-based authentication, and deploying full-stack solutions. Strong understanding of component reusability, modular backend design, and agile software delivery.

TECHNICAL SKILLS

Frontend	React.js, Next.js, React Native, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS
Backend	Node.js, Express.js, Socket.IO, Microservices Architecture
Databases	MongoDB, MySQL, MongoDB Atlas, Redis
Auth & Security	JWT Authentication, Role-Based Access Control (RBAC), API Gateway, Secure API Communication
Cloud & DevOps	Docker, Render, Vercel, GitHub Actions, CWP Panel, CI/CD, SSL Configuration, Reverse Proxy
Tools & Platforms	Postman, GitHub, Swagger, Android Studio, Gradle
Concepts	RESTful APIs, WebSockets, Real-time Systems, Service Communication, Agile, Modular Design

PROFESSIONAL EXPERIENCE

Full Stack Developer Coreline IT Solutions Pvt. Ltd — Pune, Maharashtra	Jan 2024 – Present
---	---------------------------

- Engineered and maintained modular full-stack applications leveraging the MERN stack and microservices for scalability and maintainability.
- Spearheaded the delivery of an Election Management Software integrating a Flutter mobile app with a Node.js backend.
- Constructed a multi-tenant admin panel to support multiple clients with isolated builds and configurations.
- Automated build pipelines for generating custom Flutter APKs per user instance, reducing release overhead significantly.
- Enforced JWT authentication, role-based access control, and secure API communication across all services.
- Managed deployment and hosting of backend services using CWP Panel, including database setup, reverse proxy configuration, and SSL.
- Optimized API performance and applied structured logging for better scalability and debugging.
- Collaborated on architecture planning, sprint cycles, and performance optimization in Agile workflows.

KEY PROJECTS

Election Management Software

- Engineered a multi-tenant election management system with Flutter frontend and Node.js backend supporting multiple independent client organizations.
- Architected microservices layers enabling dynamic builds per client with isolated configurations and modular API communication.
- Deployed the backend and database on a CWP Panel-managed Linux server with custom domain routing, reverse proxy setup, and SSL certificates.
- Designed and built scalable admin dashboards for managing candidates, voters, and election results in real time.
- Automated Flutter APK generation per client instance via custom build pipeline scripts, reducing manual deployment effort significantly.
- Enforced JWT-based authentication with role-based access control ensuring secure separation between admin and voter roles.
- **Tech Stack:** Node.js, Express.js, MongoDB, Flutter, JWT, CWP Panel, GitHub Actions, Docker
- Live Demo: Frontend — Demo Application (Activation Key: 223344)

PERSONAL PROJECTS

Connectify — Full-Stack Social Music Streaming Platform	Personal Project
• Architected a full-stack social music streaming platform turning solitary listening into a real-time shared experience between matched users globally. • Constructed a real-time matchmaking engine connecting music lovers within seconds using Socket.IO event-driven communication. • Introduced an interactive social coin-flip feature using WebSockets to determine the session leader in a fun and engaging way. • Designed an interleaved playlist algorithm that blends tracks from both matched users in a perfect 50/50 split for a personalized shared queue. • Achieved millisecond-perfect audio synchronization across devices using WebSocket-driven playback state management. • Crafted a cross-platform mobile application using React Native with Track Player for seamless audio playback and Google Sign-In for authentication. • Built a Next.js 16 Admin Control Center with Tailwind CSS 4 for live system health monitoring, user activity tracking, and platform analytics. • Engineered a separate Next.js download landing site for APK distribution and onboarding. • Enforced JWT-based user authentication with secure admin API protection across all services. • Applied ProGuard rules and cellular data optimization (Forced HTTPS) for stable and secure Android release builds. • Containerized services using Docker and deployed backend API and admin panel on Render.com; packaged Android APK using Gradle. • Tech Stack: React Native, Node.js, Express, Socket.IO, MongoDB Atlas, Next.js 16, Tailwind CSS 4, Redis, Docker, Gradle, Render.com • Live Demo: connectify-mu-ruby.vercel.app —  github.com/aniketbisure	

EDUCATION

B.Sc. in Computer Science	2021 – 2024
Yashwantrao Chavan Institute of Science, Satara	73.5%
Class XII (HSC)	2021
Parents' Association English School & Jr. College of Science, Satara	85%
Class X (SSC)	2019
Annasaheb Kalyani Vidyalaya, Satara	79.40%

PERSONAL INFORMATION

Date of Birth:	16th June 2003
Marital Status:	Single
Languages Known:	English, Hindi, Marathi
Nationality:	Indian

DECLARATION

I hereby declare that the information provided above is true and correct to the best of my knowledge and belief. I take full responsibility for the accuracy of the particulars mentioned herein.

Place: Pune, Maharashtra
